a what each support touches
TwoNN support
0 cross-class edges
MST support
2 cross-class connectors
same points, same positions
b real cloud, $\alpha = 1$
total $E(n)$
within: $\propto n^{1-\eta/d}$
connectors: $\approx$ const
MST edge energy
10^2
100
200
350
529
subsample size n
c real sweep, 9 seeds
fitted $\hat{d}$
